EDUCATION

University of British Columbia

BCom, Combined Major in Computer Science and Business

Vancouver, BC

Sep 2018 – May 2024

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, HTML, CSS, Java, C++, C#

Frameworks & Libraries: React, Node, Express, Koa, Redux, MaterialUI, NumPy, scikit-learn, Mocha, Chai, Jest

Databases: PostgreSQL, MongoDB

Developer Tools: Jira, Confluence, Postman, Git, Figma, Kibana, Elasticsearch

EXPERIENCE

Alida (Formerly Vision Critical)

Sep 2022 – Aug 2023

Software Developer Co-op

Vancouver, BC

- Developed **20+** **React** components with respective **REST APIs** for the Dashboards and Analytics service, improving data visualization and feature usability for **1,100+** tenants.
- Owned the planning and development of a user permission feature requested by Amazon Music, improving functionality for **5 types of user roles** by implementing multiple backend endpoints.
- Redesigned the shared date range picker, optimizing **react-query** API calls and caching logic to achieve **85%** performance improvement when sharing dashboard.
- Delivered dashboard duplication functionality, enabling the replication of infographics and calculations while maintaining accurate synchronization to the **PostgreSQL** database.
- Technologies: TypeScript, React, Node, MaterialUI, PostgreSQL, Postman, Sinon, Koa, Jest, Looker

Trulioo

Jan 2022 – Aug 2022

Software Developer in Test Co-op

Vancouver, BC

- Developed automated test suite for web-based SaaS platform, improving the internal test framework utilized by **4 teams**, ensuring robust quality code being deployed.
- Designed and created **200+** automated test scripts for document verification using **Jest**, reducing regression testing time by **88%**, enabling consistent and reliable biweekly software releases.
- Led automation testing for internationalized document verification, implementing localization test coverage for **12 regions**, reducing manual testing by **80%** across development, QA, and staging environments.
- Established comprehensive testing documentation framework using Confluence and bug reports on Jira.
- Technologies: TypeScript, C#, Node, Jest, Postman, Kibana, Selenium WebDriver, Mocha, Chai

PROJECTS

Multi-Class Image Classifier | Python, scikit-learn, NumPy, Matplotlib

Apr 2024

- Developed a multi-class image classifier using **Bag of Words (BoW)** alongside **SIFT descriptors**.
- Built a visual word vocabulary using **K-means** to represent images as histograms for feature extraction.
- Implemented a linear **SVM** classifier, achieving a **68.7%** accuracy to accurately classify **15** different image scenes.

Alida Hacks 2023, 2nd Place | TypeScript, React, Node, SQL, Charts.js, OpenAI API, Whisper API

Mar 2023

- Leveraged **Whisper API** for speech-to-text conversion, integrated with **OpenAI API** to generate **SQL** queries, enabling end users to create and retrieve dashboard infographics in a full-stack web application.
- Presented the project's design and technology stack to a company **audience of ~150** after the hackathon.
- Received endorsement from product and engineering leadership, identifying the project as a top priority to implement in production.

Storage Company Database | SQL, Java, Oracle DBMS, Swing

Oct 2020 – Nov 2020

- Collaborated with two teammates to create a database system for a fictional warehouse company.
- Designed and implemented features for users to rent store spaces and warehouse members identification, developed the **schema** for the database and wrote scripts to create and manage the database structure.
- Used **normalization** techniques on the database schema to follow **3NF**, reducing possible data anomalies.
