TECHNICAL SKILLS

Languages: Python, Java, C++, JavaScript, C#, SQL, HTML, CSS, TypeScript

Frameworks/Libraries: React, Node.js, .NET, Express, MaterialUI, Jest, JUnit, Chai, Mocha, NUnit, Koa.js

Other Technologies: Git, PostgreSQL, React Testing Library, Jira, Postman, Elasticsearch, Kibana, Figma

EXPERIENCE

Software Developer Co-op, Alida | Vancouver, BC

Sep 2022 – Aug 2023

- Owned the development of **Role-Based Access Control** features requested by a **high profile client**, improving functionality for 5 types of **user roles**, implementing backend endpoints with **Node.js** and the **Koa.js** framework
- Engineered the shared date range picker endpoint, achieving **84%** performance improvement when sharing dashboards, optimizing **react-query** API requests by caching and eliminating redundant API calls
- Delivered dashboard duplication, enabling the reproduction of infographics and calculations while maintaining accurate synchronization to the **PostgreSQL database** by leveraging the **Looker API**
- Implemented the backend development for expiration on **shareable dashboard** links, restricting access to expired dashboards, developing automated checks to validate creation timestamps with expiration rules
- Created UI components for the Dashboards and Analytics service, improving data visualization and feature usability for **450+ tenants** by implementing reusable and modular components with **React and TypeScript**
- Built the **dashboard sharing** feature with a customized **MUI Date Range Picker**, extending default functionality by overriding MUI styles, injecting custom buttons and single-box date displays through prop manipulation
- Implemented **pagination** for dashboard reports using **React** and **MaterialUI**, delivering one sprint ahead of schedule, improving user navigation for created reports

Software Engineer in Test Intern, Trulioo | Vancouver, BC

Jan 2022 – Aug 2022

- Built and maintained 200+ automated **test scripts** for document verification, reducing regression testing time by **88%**, by using **Jest**, **TypeScript** and **Selenium WebDriver**, enabling reliable biweekly software releases
- Led automation testing for internationalized document verification, using **TypeScript** and **Jest**, implementing test coverage for **12 regions**, reducing manual testing by 82% across development, QA, and staging environments
- Extended the **automated test suite** for web-based SaaS platform, streamlining internationalization testing and accelerating development for **4 internal teams** by adding reusable **locale** testing methods
- Executed regression, unit, and integration testing on the document verification platform across **multiple devices** and **platforms**, ensuring reliable releases by writing automated tests and tracking issues in **JIRA**
- Improved reliability of automated tests in **CI/CD** pipelines, reducing intermittent test failures by identifying root causes and updating flaky tests

PROJECTS

Multi-Class Image Classifier | *Python, scikit-learn, NumPy, Matplotlib*

Apr 2024

- Developed a multi-class **image classifier** using Bag of Words (BoW) alongside SIFT descriptors
- Built a visual word vocabulary using **K-means** to represent images as histograms for feature extraction
- Implemented a linear SVM classifier, achieving a 68.7% accuracy to accurately classify 15 different image scenes

Alida Hacks 2023, 2nd Place | *TypeScript, React, Node.js, SQL, Charts.js, OpenAI API, Whisper API*

Mar 2023

- Leveraged **Whisper API** for speech-to-text conversion, integrated with OpenAI API to generate SQL queries, enabling end users to create and retrieve dashboard infographics in a full-stack web application
- Presented the project's design and technology stack to the company audience of **~120** after the hackathon
- Received **endorsement** from C-suite identifying the project as the next top priority to implement in production

Storage Company Database | *Java, SQL, Oracle DBMS, Swing (Java)*

Oct 2021 – Nov 2021

- Collaborated with two teammates to create a **relational database** system for a fictional warehouse company
- Designed the database schema and wrote backend scripts in **Java** to create and manage the database structure
- Implemented features to rent storage units, warehouse members identification, and storage usage calculations

EDUCATION

University of British Columbia

Combined Major in Computer Science and Business

Sep 2018 – May 2024

Vancouver, BC
